

Dashboard - Harmony

Harmony is a task automation module that will allow you to save time in automating processes and tasks for your daily management.
There are three tabs available: Dashboard, Solutions and Tasks.

Summary

The DASHBOARD will give you an overview of the tasks that are planned or already performed as well as the time saved by automating these processes via Harmony.
In Tasks in real time you can see the exact tasks that are/were to be executed, also if there were any errors it will be visible.

Errors can have multiple reasons, for example:

- error in the email address
- email rejected by spamfilter

By clicking "SEE ALL" you will get an overview of all the tasks that were performed last week, those that will be processed today and next week.

In tasks performed you will see the actual figures of the tasks performed in the last week, month and since the day of activation.
